
cNODE MiniS

KONGSBERG

Software release notes

Release 7.09

New functionality

- Supports new Cymbal profiles: 1800 bps, 2500 bps, 4500 bps and 6000 bps.

Improvements

- Improved battery charging algorithm for 24V external power (ROV use).

Release 7.04

New functionality

- TTC Light transponder tester functionality. This means a cNODE MiniS transponder can be used to test other transponders acoustically. The MiniS transponder is connected with a serial cable to a PC with “TTC Light” software installed.

Improvements

- The calculation of X- and Y-inclination from the internal tilt sensor uses a new algorithm.
- Corrected the presentation of battery production date (cNODE production info).

Release 7.03

Improvements

- Improved Cymbal telemetry at short range.

Release 7.02

- First release of cNODE MiniS software.
