

# 4000 m Multi-Frequency Imaging Sonar Head with Composite Transducer & Acoustic Lens

KONGSBERG

**P/N 975-21230000**

The 4000 m 1171 series of sonar heads has been optimized to meet the requirements of deep-ocean applications. These sonar heads provide the highest level of image quality. The wide-band composite transducer is protected within an oil-filled, pressure-compensating dome. The transducer features a patented<sup>1</sup> salt water-filled acoustic lens that maintains beam focus throughout the entire temperature and depth operating range. The telemetry is RS485 and RS232 compatible and is automatically sensed and configured at startup. The sonar head is configured and controlled using the MS1000 Software.
