
Kongsberg cNODE MiniS

KONGSBERG

Software release note

Software release note

Release 7.10

Improvements

- Minor corrections related to automated manufacturing tests

Release 7.09

- Supports new Cymbal profiles: 1800 bps, 2500 bps, 4500 bps and 6000 bps

Improvements

- Improved battery charging algorithm for 24 V external power (ROV use)

Release 7.04

- TTC Light transponder tester functionality

This means a cNODE MiniS transponder can be used to test other transponders acoustically. The MiniS transponder is connected with a serial cable to a PC with **TTC Light** software installed.

Improvements

- The calculation of X- and Y-inclination from the internal tilt sensor uses a new algorithm
- Corrected the presentation of battery production date (cNODE production info)

Release 7.02

Improvements

- Improved Cymbal telemetry at short range
